DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Specie A: elect either the composition comprising the following Claims 1 and 10-22 or the composition comprising Claims 1 and 24.

If the composition comprising Claims 1 and 10-22 is elected, further elect the following:

- i.) elect at least one amino acid from Claim 10.
- ii.) elect at least two electrolytes from Claim 15 or Claim 16.
- iii.) elect one filler from Claim 18 or 19.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Specie A: composition comprising Claims 1 and 10-22 drawn to Claims 1-23 and 25; a composition comprising Claims 1 and 24 are drawn to Claims 1-9, 24 and 25.

The following claim(s) are generic: Claims 1-4 10, 17, 19 and 25.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The compositions are distinct both are distinct both physically and functionally from each and a search for one composition is not co-extensive with a search for another.
